

Sarvathaa Course Calculator Help

1. Enter count

Count means how many students, cakes, batches or practice sets you want to prepare.

2. Qty per count

This is the quantity required for one count. Example: 250 ml milk for one dessert batch.

3. Total Qty

The calculator multiplies Qty per count x Count. Example: 250 ml x 2 = 500 ml.

4. Wastage %

Wastage means extra quantity for mixing loss, sticking to bowl, spilling or practice loss.

5. Final Buying Qty

This is the final quantity you should arrange or buy after adding wastage.

6. Pack Size and Pack Price

Enter the shop pack size and price. Example: milk pack size 1000 ml and price Rs. 65.

7. Cost Used

Final Buying Qty / Pack Size x Pack Price. Example: 525 ml / 1000 ml x Rs. 65 = Rs. 34.13.

8. Optional Revenue

Enter selling amount or course collection only if you want profit. Profit = Revenue - Total Buying Cost.

No download/share button is provided inside the student login. Documents are view-only course notes for paid learners.
